The true gravimetric densities of the metallic blocks used in this calibration are listed on Page 1 of this document. To account for the influence of the chemical composition of these blocks on instrument response (as prescribed in ASTM D2950, Section A1.3 and D6938, Section A1.1.1), these gravimetric densities are multiplied by chemical correction factors prior to the calculation of the density calibration parameters shown on Page 1 of this document. These correction factors are 0.988 for magnesium, 0.974 for magnesium/aluminum, and 0.964 for aluminum.

Statement of Traceability:

"The above referenced equipment has been calibrated by the manufacturer to established and documented procedures. Density values for the standards used in the calibration of this equipment were established using instruments whose measurements are traceable to the National Institute of Standards and Technology. Test procedures and supporting documentation are available upon request."

Troxler Model 03430 Calibration Report (Page 3 of 3)

Gauge model - 03430

Gauge serial number - 028086

Reference standard counts: Density = 02436 Moisture = 0645

Calibration Date: 7/6/2011 Print Date: 7/6/2011 Bay = 060

This instrument was found to be mechanically sound and electronically stable both prior to and after its calibration. All data listed in the preceding two pages of this report are applicable to this instrument only.

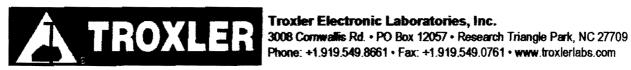

This calibration was performed at:

Troxler Electronics 2016 East Randol Mill Road, Suite 406 Arlington, TX 76011

Special considerations and limitations of use for this device and its calibration are described in the Manual of Operation and Instruction provided with this instrument.

This report shall not be reproduced except in full, without the written approval of Troxler Electronic Laboratories, Inc.

This instrument was calibrated by pm on 7/6/2011 using the Method 1 Calibration process.

Gauge Safety Inspection Report

Model: 3430	SN: 28086	RO#: 18855
nspected at: TX	1 - Auto (Orbital) weld 2 - Manual Weld	Inspection Date: 6/29/201
Handle Condition	Overall Gauge Condition	AmBe Plug - As Found
1 - Normal	○ 1 - Good	○ Tight
2 - Abused (comments)	2 - Normal	○ Loose
	3 - Poor (comments) 4 - Abused (comments)	Not applicable
- Sliding Block - As Found	Reason Not Fully Closed	AmBe Plug - Fixed ——
0 - Fulty Closed	1 - Excessive Dirt	Yes (Loctite applied)
1 - <= 25% Open	2 - Weak Spring	No (already done)
2 - 26-50% Open	○ 3 - Both	Not required
3 - 51-75% Open	○ 4 - Other (Comments)	Only required for gauges with
○ 4 -75-100% Open		tall plugs & serial numbers
5-Fully Open		less than 39000.
